

Design-focused Front-end Developer Project Brief

Background

Welcome to the second round of the iX interview! This take-home project will give us a sense of how you approach a real-world problem. Feel free to use the Internet and whatever additional resources you'd like—but all the work you do should be your own. We're looking for:

- Your ability to come up with bold, creative, and beautiful new web designs.
- Your ability to code a mobile-responsive, beautiful website using HTML/CSS and [Bootstrap 4](#).

This is also your chance to see what it will be like to work at iX—we hope you love the challenge!

This challenge is open-ended, so we ask you to limit the amount of time you spend to 5 hours. Submission instructions are at end. If you have any questions, please do not hesitate to ask.

Project: Redesign the iXperience Summer Remote page

The [iXperience Summer Remote page](#) is the first page most people visit when getting to our summer program, and is the most important page on any of our websites. **Your challenge is to redesign it to the best of your ability.**

Some additional details and specifications:

- Feel free to change the imagery, layout, and style.
- It is incredibly important that your website look great on **all** screen sizes (in particular phones and medium-sized laptops).
- Please ensure all the content stays the same, as well as the logo and the pink color (#F9007A).
- Please do **not** change the navbar or the footer. Focus on the body of the page instead.
- We encourage you to copy-paste the navbar and footer code by inspecting the live website. If you try to recode the navbar and the footer, you will have less time to focus on the body of the website.
- In particular, the site should have the same buttons and links (it's OK if they are just placeholders and don't actually work).
- Please do not include additional CSS frameworks other than Bootstrap, though writing your own CSS is OK.
- Bootstrap 4 comes included with [jQuery](#). You can include additional Javascript plugins / frameworks if you'd like, but this is not necessary.
- If you'd like to use other images or icons, feel free to explore the rest of the website or find some (free) stock images to use.
- Remember, we want you to be bold and creative! Take risks with your design.

Submission instructions

Please upload your code to Github and share it with the username **khannotations**. Additionally, follow [these instructions](#) to create a Github page, and email the URL to your page to **rafi@ixperience.co**. We recommend you submit your code within 7 days of receiving the brief, but please ask if you need more time.

Again, we encourage you to ask questions if anything is unclear. Looking forward to seeing your work!
